EDUCATION

NED University of Engineering & Technology, Karachi <i>Bachelor of Engineering — Telecommunications Engineering</i>	Sep 2022 – Aug 2026
Aptech Pakistan, Karachi <i>Advance Diploma in Software Engineering</i>	Sep 2022 – Oct 2025
Habib Public School, Karachi <i>Intermediate in Computer Science</i>	Aug 2020 – Aug 2022

EXPERIENCE

Azfam Technologies, Karachi <i>IoT Web Development Intern</i>	Dec 2025 – Jan 2026
- Built an IoT-based web AC automation system for remote climate control, reducing manual intervention. - Developed a responsive web interface for real-time sensor monitoring and device control. - Integrated IoT sensors and actuators with a live web dashboard using Firebase.	

SKILLS

Technical	Embedded Systems, IoT, Wireless Communications, RTOS, LoRa, ESP32, Raspberry Pi
Programming	Python, C/C++, JavaScript, PHP, HTML & CSS
Frameworks	Flask, OpenCV, Firebase, MySQL, Bootstrap, Git, Linux
Soft Skills	Leadership, Teamwork, Problem-Solving

PROJECTS

SHARC — Self-Healing Anti-Jamming Radio Communication <i>Final Year Project, In Progress</i>	nexsys.live
<i>ESP32-S3 · LoRa SX1276/SX1278 · Edge ML · Imitation Learning</i>	
- Developing an AI-driven anti-jamming wireless communication system for reliable long-range transmission in interference-prone environments. - Implementing edge-based ML models with imitation learning for real-time jamming detection and adaptive channel switching.	
DoorCam — Smart IoT Security System	github.com/TechWizardsTechwiz6/Wavebell
<i>Python · OpenCV · Flask · Firebase · Twilio · Raspberry Pi 4B</i>	
- Built an IoT facial recognition door system with PIR, ultrasonic and LDR sensors for intelligent access control. - Implemented live video streaming, two-way audio, automated lighting and SMS/push alerts via Firebase and Twilio. 2nd Runner-Up — International IoT Ignite 2025 (APTECH).	
WeatherNinja — Smart Weather Monitoring Station	github.com/mshayandev/techwiz
<i>Python · Firebase · Raspberry Pi 4B · DHT11 · BMP280 · YL-83</i>	
- Developed a smart weather station storing real-time sensor data in Firebase, displayed on a web dashboard and LCD screen. - Built a mobile app with admin login, historical data view and automated SMS alerts for extreme weather conditions. Winner — Global IoT Solution Development (APTECH 2024).	
NED Directorate of Industrial Liaison — Web Platform	github.com/mshayandev/NEDDIL-main
<i>HTML · CSS · JavaScript · PHP · MySQL</i>	
Full-stack platform connecting NED students with industry; admin dashboard managing 500+ applications with SEO and FYDP management modules.	
TE Links Website — Telecommunication Student Society	telinks.org
<i>HTML · Bootstrap · JavaScript · PHP · MySQL · AOS</i>	
Designed and developed a 7-page responsive society website covering Home, Team, Gallery, Alumni and Academics sections.	

- Built a registration platform with dual delegate flows, brand ambassador system, admin dashboard with real-time stats and CSV export.

AWARDS & HONORS

2nd Runner-Up — International IoT Ignite | APTECH

Nov 2025

Recognized for DoorCam: IoT facial recognition system with real-time monitoring, two-way audio and automated security alerts.

Winner — Global IoT Solution Development | APTECH

Nov 2024

Awarded for WeatherNinja: smart weather station with real-time Firebase data, LCD display, mobile app and SMS alert system.
